

# Manifesto for Regenerative Futures

## **We stand at a crossroads.**

Humanity faces cascading crises: climate disruption, biodiversity collapse, accelerating unethical use of technologies, growing inequality, geopolitical fragmentation, systemic eco-socio-economic failures, and the erosion of trust in democracy. Yet within these challenges lies an extraordinary opportunity: to create a future that cherishes life in all its forms.

## **We believe:**

- That the foundation of all human progress is a healthy biosphere.
- The real change may happen only when people are aware of the direct and indirect value of the regenerative development concepts and projects for their well-being, prosperity and resilience.
- That regeneration must replace extraction as the guiding principle of our economies and societies.
- That innovation, when guided by purpose and ethics, and designed and supported for replication and scaling, can unlock solutions for people and the planet.
- That artificial intelligence and other exponential technologies must be harnessed to serve humanity and nature, not to divide or dominate.
- That Nature is inclusive of all human beings. The rights of nature and human rights can, and should, be mutually reinforcing.
- That trust, compassion, and collaboration across borders, cultures, and generations are the true currency of a flourishing civilisation.

## **Therefore, we commit to:**

- Co-creating a global alliance and ecosystem of ecosystems that identifies, scales, and [MOU3] connects regenerative and nature-positive innovations, investments and economies.
- Building regenerative and resilient bioregions, cities and rural areas, food and other industrial systems, and energy and other infrastructures that sustain rather than exploit.
- Standing for openness, ethics[MOU4], democracy, and human dignity against the rise of division and autocracy.
- Nurturing communities of belonging, empathy, and creativity so that all may thrive.
- Acting with urgency, because the time for half-measures has passed.

We are the architects of regenerative futures.

Together, we choose life over destruction, collaboration over competition, and hope over despair.
